FBG-SEANet: frequency-band graph construction and diagnosis

01 Frequency-band graph

02 Graph-level diagnosis

Source-visible structural redraw · not a numerical adjacency matrix

Reading guide

1 Filter

Remove operational components from sensor signals.

2 Construct

Build frequency-specific subgraphs and connect them.

3 Diagnose

Fuse GCN/pooling and energy-assisted SR paths.

Evidence boundary

Sensor glyphs and graph adjacency are schematic vector redraws.
